                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                            2. ING1. Functional cooperation between ING1 and p53 suggested that ING1 encoded a tumour suppressor protein that functioned within the p53 pathway. This data suggested a possible role for ING1 in head and enceres and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its expression suggesting that ING1 was not a useful gene to study in cancer etiology. However, alternative initiation exons of the ing1 gene, each having that own promoter have been discovered. Expression of one promoter (1a) produces a protein identical to ING1. Expression of a second promoter (1b) produces a protein having an identical C-terminal fragment to ING1 but an additional 104 can identical C-terminal fragment to ING1 but an additional 104 characteristics of an oncogene. When overexpressed in cells (even designated p371NG1 (Wild type p53) p371NG1 is able to cause proliferation or transformation of those cells. Thus detecting a nucleic acid encoding exon 1b of ing1 by hybridisation with an included acid encoding exon 1b of ing1 by hybridisation with an included acid encoding exon 1b of ing1 by hybridisation with an included acid encoding exon 1b of ing1 by hybridisation with an include acid encoding exon 1b of ing1 by an order of exon 1b of ing1 by and ing1 by and ing1 by an order of exon 1b of ing1 by and ing1 by an order of exon 1b of ing1 by and ing1 by ing1 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting nucleic acid encoding exon 1b of ingl, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or its antisense sequence can identify individuals expressing the oncogenic form of ingl. Novel peptide sequences taken from the 104 N-terminal peptide of p371NG1 can also be used to raise antibodies that can also be used in detection methods for the p371NG1 variant. The polypeptides may be useful in gene therapy for treatment of cell proliferation disorders, especially cancers and for diagnosing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

In many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                p53; tumour; cancer; detection; antibody; hybridisation; exon 1b; INC1; ing1; p33INC1; p37ING1; oncogene; gene therapy; diagnosis; proliferation disorder; transformation; transformed cell; mouse.

Nutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of the p53 gene many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with ING1 encoded a tumour suppressor protein that functional within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not revealed mutations in ING1 nor significant variations in its cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative a produces a protein having each having their own promoter have been discovered. Expression of one promoter (1a) produces a protein has been destinated p37ING1 (wild type: p33ING1). p37ING1 has the characteristics of an oncogene. When overexpressed in cells (even those expressing wild type p53) p37ING1 is able to cause of cancer and an oncogene. When overexpressed in cells cause concogenic form of ing1. Novel peptide sequences taken from the 104 Neterminal peptide of p37ING1 can also be used to raise antibodies that can also be used in detection methods for the p37ING1 variant. The polypeptides may be useful in gene therapy for treatment of cells producers and for diagnosing and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protein identification; signal transduction pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

                                                                                                                                                                                                                                                                              δy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PECR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasonable for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human cdiagenere and to this patent did not appear in the printed constitution constit

cancer associated nucleic actions (N) and proteins (P), where
the proteins are collectively known as colon cancer antigens. The colon
cancer antigens have cytostatic activity and can be used in gene
therapy and vaccine production. N and P may be used in the prevention,
charapy and treatment of diseases associated with inappropriate P
cc expression. For example, N and P may be used to treat disorders
cassociated with decreased expression by rectifying mutations or deletions
cn in a patient's genome that affect the activity of P by expressing
cn inactive proteins or to supplement the patients own production of P.
Additionally, N may be used to produce the colon cancer-associated Ps,
cby inserting the nucleic acids into a host cell and culturing the cell
co express the proteins. N and P can be used in the prevention, diagnosis
cand treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204
and AAB37789 represent sequences used in the exemplification of the
cross of time of publication, meaning no sequences listing were
missing at time of publication, meaning no sequences are present for

Nutations in or loss of the p53 gene occur in more than 50% of human tumours and tumour cell lines, but functional inactivation of the p53 pathway occurs in a much larger proportion of the p53 gene many cases the mechanism of functional inactivation of the p53 gene remains unknown but p53 has been found to act in cooperation with cremains unknown but p53 has been found to act in cooperation with corrected a tumour suppressor protein that functionad within the p53 pathway. This data suggested a possible role for ING1 in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers and chromosomal location of the ING1 placed it within a region that is frequently rearranged in head and neck cancers. Large scale analysis of tumours involving ING1 has not within a region, that in ING1 mor significant variations in its cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer etiology. However, alternative initiation exons of the ing1 cancer expression of a second promoter (lb) produces a protein having the newly discovered protein having concept of an oncogene. When overexpressed in cells (even those expression of an oncogene. When overexpressed in cells (even those expressing wild type p53) p371NG1 has the coalse proliferation or transformation of ting1 by hybridisation with an concept of an oncogenic form of ing1. Novel peptide sequences taken from the 104 or its antisense sequence can identify individuals expressing the oncogenic form of ing1. Novel peptide sequences taken from the 104 or its antisense sequence can identify individuals expressing and expudence as identified and become indentify individuals expressing the study of the cancer of the cancer of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting nucleic acid encoding exon 1b of ing1, useful for diagnosing and treating cancer, comprises contacting sample with isolated nucleic acid comprising sequence of exon 1b and detecting hybridized products
                                                                                                                                                                                                                                                                                                                                                                                                     p53; tumour; cancer; detection; antibody; hybridisation; exon 1b; ING1; ing1; p331NG1; p371NG1; oncogene; gene therapy; diagnosis; proliferation disorder; transformation; transformed cell; mouse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gudkov A, Zeremski M, Gurova KV, Grigorian IA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence corresponds to a fragment of a rapamycin FK506 binding protein (RFKBP). RFKBP is a prolyl isomerase structurally related to FK506 which does not bind the immunosupressive cyclosporin A. RKFBP binds FK506 and rapamycin with quantitatively significant selectivity. RKFBP may be used in screening assays to detect new immunosupressants and to differentiate rapamycin-like cpds. from PK506-like cpds. Rapamycin is a macrolide which is structurally related to FK506. This RFKBP has been isolated from bovine thymus (bRFKBP) and was found to be of low molecular weight, approx. 16,000, and to have cis-trans prolyl isomerase activity. The N terminal of bRFKBP has been shown to have over 50% homology to the N terminal of FKBP12.

This is the amino acid sequence of the human p28·ING1 protein, used in the method of the invention, involving the human p33·ING1 brotein. The ING1 gene encodes p33·ING1 which can be used to protein. The ING1 gene encodes p33·ING1 which can be used to modulate the activity of, isolate or detect p53. Expression of the control and p53 genes in a mammalian cell results in normal growth crequiation anchorage-dependent growth and apoptosis as a response to irreversible DNA damage and other cellular insult. Inhibition of expression of either gene results in a loss of cellular growth control, anchorage independent growth, inhibition of apoptosis and resistance to radiation and oytcoxic drugs. The p33·ING1 is a component of the p53 signalling pathway that cooperates with p53 in negative regulation of cell proliferation by modulating p53 dependent transcriptional activation. Biological function of p53 signalling pathway can therefore be regulated (both enhanced or suppressed) by modulating p33·ING1 activity. The modulation of p33·ING1 activity can be used for the stimulation or restoration of the p53 pathway in cantic cancer therapy or for the suppression of the p53 pathway to defend sensitive tissues from genotoxic stress or for the generation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 32; DB 20; Length 128;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                           expressed sequence tag; secreted protein; cDNA isolation;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs different total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with inteact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      chromosome mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; p33-ING1 protein; growth regulation; apoptosis; DNA damage; inhibition; anchorage independent growth; cytotoxic drug; cancer; transcriptional activation; immortal cell line; p28-ING1 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  78.0%; Score 32; DB 21; Length 104; 71.4%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                   The present invention relates to proteins derived from bovine mammary gland cells. The invention is useful for stimulating bovine mammary gland cell growth and function, inhibiting the growth of various mammary gland cancer cells, inhibiting anglogenesis and vascularization of tumours, or modulating the growth of blood vessels in a mammal.

The FKBP-13 protein may be used for identifying immunosuppressant drugs, and may be used in combination with immunosuppressant drugs for therapeutic purposes in the treatment of autoimmune disease e.g. rheumatoid arthritis and type-I diabetes, organ transplant and graft versus host disease. The recombinant form of the protein could be potentialler and therefore easier to introduce into cells than intact FKBP-13.
                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
Purified mammalian FKBP-13 polypeptide capable of binding FK506 useful for identifying and studying immunosuppressant drugs

Bulach D.W., Kumar C.A., Zaia A., Liang B., Tribe D.E.;

"Group II Nucleopolyhedrovirus Subgroups Revealed by Phylogenetic
Analysis of Polyhedrin and DNA Polymerase Gene Sequences.";

L. Submitted (MAY-1998) to the EMBL/Genbank/DDBJ databases.

-!-CATALYTIC ACTIVITY: N DEOXYNUCLEOSIDE TRIPHOSPHATE = N
PYROPHOSPHATE + DNA(N).

-!-SIMILARITY: BELONGS TO DNA POLYMERASE TYPE-B FAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
